#### Abstract:

Describes additional (optional) message encodings as an alternative to the (mandatory) raw TTLV (Tag, Type, Length, Value) encoding including HTTPS, JSON and XML.

#### Status:

This document was last revised or approved by the membership of OASIS on the above date. The level of approval is also listed above. Check the "Latest version" location noted above for possible later revisions of this document. Any other numbered Versions and other technical work produced by the Technical Committee (TC) are listed at https://www.oasis-open.org/committees/tc\_home.php?wg\_abbrev=kmip#technical.

Technical Committee members should send comments on this specification to the Technical Committee's email list. Others should send comments to the Technical Committee by using the "Send A Comment" button on the Technical Committee's web page at https://www.oasis-open.org/committees/kmip/.

For information on whether any patents have been disclosed that may be essential to implementing this specification, and any offers of patent licensing terms, please refer to the Intellectual Property Rights section of the Technical Committee web page (https://www.oasis-open.org/committees/kmip/ipr.php.

All capitalized terms in the following text have the meanings assigned to them in the OASIS Intellectual Property Rights Policy (the "OASIS IPR Policy"). The full Policy may be found at the OASIS website.

This document and translations of it may be copied and furnished to others, and derivative works that comment on or otherwise explain it or assist in its implementation may be prepared, copied, published, and distributed, in whole or in part, without restriction of any kind, provided that the above copyright notice and this section are included on all such copies and derivative works. However, this document itself may not be modified in any way, including by removing the copyright notice or references to OASIS, except as needed for the purpose of developing any document or deliverable produced by an OASIS Technical Committee (in which case the rules applicable to copyrights, as set forth in the OASIS IPR Policy, must be followed) or as required to translate it into languages other than English.

The limited permissions granted above are perpetual and will not be revoked by OASIS or its successors or assigns.

This document and the information contained herein is provided on an "AS IS" basis and OASIS DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTY THAT THE USE OF THE INFORMATION HEREIN WILL NOT INFRINGE ANY OWNERSHIP RIGHTS OR ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

OASIS requests that any OASIS Party or any other party that believes it has patent claims that would necessarily be infringed by implementations of this OASIS Committee Specification or OASIS Standard, to notify OASIS TC Administrator and provide an indication of its willingness to grant patent licenses to such patent claims in a manner consistent with the IPR Mode of the OASIS Technical Committee that produced this specification.

OASIS invites any party to contact the OASIS TC Administrator if it is aware of a claim of ownership of any patent claims that would necessarily be infringed by implementations of this specification by a patent holder that is not willing to provide a license to such patent claims in a manner consistent with the IPR Mode of the OASIS Technical Committee that produced this specification. OASIS may include such claims on its website, but disclaims any obligation to do so.

OASIS takes no position regarding the validity or scope of any intellectual property or other rights that might be claimed to pertain to the implementation or use of the technology described in this document or the extent to which any license under such rights might or might not be available; neither does it represent that it has made any effort to identify any such rights. Information on OASIS' procedures with respect to rights in any document or deliverable produced by an OASIS Technical Committee can be found on the OASIS website. Copies of claims of rights made available for publication and any assurances of licenses to be made available, or the result of an attempt made to obtain a general license or permission for the use of such proprietary rights by implementers or users of this OASIS Committee Specification or OASIS Standard, can be obtained from the OASIS TC Administrator. OASIS makes no representation that any information or list of intellectual property rights will at any time be complete, or that any claims in such list are, in fact, Essential Claims.

The name "OASIS" is a trademark of OASIS, the owner and developer of this specification, and should be used only to refer to the organization and its official outputs. OASIS welcomes reference to, and implementation and use of, specifications, while reserving the right to enforce its marks against misleading uses. Please see <a href="https://www.oasis-open.org/policies-guidelines/trademark">https://www.oasis-open.org/policies-guidelines/trademark</a> for above guidance.

# 1 Introduction

- 2 For normative definition of the elements of KMIP see the KMIP Specification [KMIP-SPEC] and the KMIP
- 3 Profiles [KMIP-PROF].

1

6

7

12

- 4 This profile defines the necessary encoding rules for the transport of KMIP TTLV messages encoded in:
- Hypertext Transfer Protocol [RFC2616] over <u>TLS</u> as specified in <u>HTTP over TLS</u> [RFC2818]
  - <u>JavaScript Object Notification</u> [RFC4627]
  - Extensible Markup Language [XML]

# 8 1.1 Terminology

- 9 The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD
- 10 NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described
- 11 in [RFC2119].

# 2 HTTPS Profile

- 52 The Hypertext Transfer Protocol over Transport Layer Security (HTTPS) is simply the use of HTTP over
- 53 TLS in the same manner that HTTP is used over TCP.
- 54 KMIP over HTTPS is simply the use of KMIP messages over HTTPS in the same manner that KMIP is
- 55 used over TLS.

51

56

78

82

85

#### 2.1 Authentication Suite

- 57 Implementations conformant to this profile SHALL support one or more of the Authentication Suites
- defined within section 3 of [KMIP-PROF].

## 59 **2.2 KMIP Port Number**

- 60 KMIP servers conformant to this profile MAY use TCP port number 5696, as assigned by IANA, to receive
- and send KMIP messages provided that both HTTP and non-HTTP encoded messages are supported.
- 62 KMIP clients SHALL enable end user configuration of the TCP port number used, as a KMIP server may
- 63 specify a different TCP port number.

# 64 2.3 Request URI

- 65 KMIP servers conformant to this profile SHOULD support the value /kmip as the target URI.
- 66 KMIP clients SHALL enable end user configuration of the target URI used as a KMIP server may specify
- 67 a different target URI.

# 68 2.4 HTTP Encoding - Client

- 69 KMIP client implementations conformant to this profile:
- 70 1. SHALL support HTTP/1.0 and/or HTTP/1.1 over TLS conformant to [RFC2818]
- SHALL use the POST request method
- SHALL specify a Content-Type of "application/octet-stream" if the message encoding is TTLV
- SHALL specify a Content-Type of "text/xml" if the message encoding is XML
- SHALL specify a Content-Type of "application/json" if the message encoding is JSON
- 75
   SHALL specify a Content-Length
- 76 7. SHALL specify a Cache-Control of "no-cache"
- 77 8. SHALL send KMIP TTLV message in binary format as the body of the HTTP request

79 KMIP clients that support responding to server to client operations SHALL behave as a HTTPS server.

# 80 2.5 HTTP Encoding - Server

- 81 KMIP server implementations conformant to this profile:
  - 1. SHALL support HTTP/1.0 and HTTP/1.1 over TLS conformant to [RFC2818]
- 2. SHALL return HTTP response code 200 if a KMIP response is available
- SHALL specify a Content-Type of "application/octet-stream" if the message encoding is TTLV
  - SHALL specify a Content-Type of "text/xml" if the message encoding is XML
- SHALL specify a Content-Type of "application/json" if the message encoding is JSON
- 87
   SHALL specify a Content-Length

SHALL specify a Cache-Control of "no-cache"
 SHALL send KMIP TTLV message in binary format as the body of the HTTP request
 KMIP servers that support server to client operations SHALL behave as a HTTPS client.

92

# 3 HTTPS Profile Test Cases

- The test cases define a number of request-response pairs for KMIP operations. Each test case is provided in the XML format specified in section 6 intended to be both human-readable and usable by automated tools. The time sequence (starting from 0) for each request-response pair is noted and line numbers are provided for ease of cross-reference for a given test sequence.
- Each test case has a unique label (the section name) which includes indication of mandatory (-M-) or optional (-O-) status and the protocol version major and minor numbers as part of the identifier.
- The test cases may depend on a specific configuration of a KMIP client and server being configured in a manner consistent with the test case assumptions.
- Where possible the flow of unique identifiers between tests, the date-time values, and other dynamic
- items are indicated using symbolic identifiers in actual request and response messages these dynamic
- values will be filled in with valid values.

93

107

108109

110

111112

Note: the values for the returned items and the custom attributes are illustrative. Actual values from a real client system may vary as specified in section 8.4

# 3.1 Mandatory HTTPS Profile Test Cases KMIP v1.0

# 3.1.1 MSGENC-HTTPS-M-1-10 - Query, Maximum Response Size

- Perform a Query operation, querying the Operations and Objects supported by the server, with a restriction on the Maximum Response Size set in the request header. Since the resulting Query response is too big, an error is returned. Increase the Maximum Response Size, resubmit the Query request, and get a successful response.
- The specific list of operations and object types returned in the response MAY vary.

# 3.2 Mandatory HTTPS Profile Test Cases KMIP v1.1

# 3.2.1 MSGENC-HTTPS-M-1-11 - Query, Maximum Response Size

Perform a Query operation, querying the Operations and Objects supported by the server, with a restriction on the Maximum Response Size set in the request header. Since the resulting Query response is too big, an error is returned. Increase the Maximum Response Size, resubmit the Query request, and get a successful response.

```

# 3.3 Mandatory HTTPS Profile Test Cases KMIP v1.2

# 3.3.1 MSGENC-HTTPS-M-1-12 - Query, Maximum Response Size

Perform a Query operation, querying the Operations and Objects supported by the server, with a restriction on the Maximum Response Size set in the request header. Since the resulting Query response is too big, an error is returned. Increase the Maximum Response Size, resubmit the Query request, and get a successful response.

```

# 4 JSON Profile

- The JSON profile specifies the use of KMIP replacing the TTLV message encoding with a JSON message
- 133 encoding. The results returned using the JSON encoding SHALL be logically the same as if the message
- encoding was in TTLV form. All size or length values specified within tag values for KMIP items SHALL be
- the same in JSON form as if the message encoding were in TTLV form. The implications of this are that
- 136 items such as MaximumResponseSize are interpreted to refer to a maximum length computed as if it
- were a TTLV-encoded response, not the length of the JSON-encoded response.

# 4.1 JSON Encoding

# 4.1.1 Hex representations

- Hex representations of numbers must always begin with '0x' and must not include any spaces. They may
- use either upper or lower case 'a'-'f'. The hex representation must include all leading zeros or sign
- extension bits when representing a value of a fixed width such as Tags (3 bytes), Integer (32-bit signed
- big-endian), Long Integer (64-bit signed big-endian) and Big Integer (big-endian multiple of 8 bytes). The
- 144 Integer values for -1, 0, 1 are represented as "0xfffffffff", "0x00000000", "0x00000001". Hex
- representation for Byte Strings are similar to numbers, but do not include the '0x' prefix, and can be of
- 146 any length.

131

138

139

147

150

154

## 4.1.2 Tags

- 148 Tags are a String that may contain either:
- The 3-byte tag hex value prefixed with '0x'
  - The normalised text of a Tag as specified in the KMIP Specification
- 151 Other text values may be used such as published names of Extension tags, or names of new tags added
- in future KMIP versions. Producers may however choose to use hex values for these tags to ensure they
- are understood by all consumers.

# 4.1.3 Normalizing Names

- 155 KMIP text values of Tags, Types and Enumerations SHALL be normalized to create a 'CamelCase'
- format that would be suitable to be used as a variable name in C/Java or an JSON name.
- 157 The basic approach to converting from KMIP text to CamelCase is to separate the text into individual
- word tokens (rules 1-4), capitalize the first letter of each word (rule 5) and then join with spaces removed
- 159 (rule 6). The tokenizing splits on whitespace and on dashes where the token following is a valid word.
- The tokenizing also removes round brackets and shifts decimals from the front to the back of the first
- word in each string. The following rules SHALL be applied to create the normalized CamelCase form:
  - 1. Replace round brackets '(', ')' with spaces
  - 2. If a non-word char (not alpha, digit or underscore) is followed by a letter (either upper or lower case) then a lower case letter, replace the non-word char with space
  - 3. Replace remaining non-word chars (except whitespace) with underscore.
  - 4. If the first word begins with a digit, move all digits at start of first word to end of first word
- Capitalize the first letter of each word
- 168 6. Concatenate all words with spaces removed

162 163

164 165

166

```
170
       # 1. Replace brackets with space
       noBrackets = re.sub('[()]', ' ', enumName)
171
       # 2. replace \W with space if followed by letter, lower
172
       nonWordToSpace = re.sub('\W([A-Za-z][a-z])', r' \1', noBrackets)
173
174
       # 3. non-word to underscore
175
       words = [re.sub('\W', '_', s) for s in nonWordToSpace.split()]
176
       # 4. move numbers to end of first word
       words[0] = re.sub('^(\d+)(.*)', r'\2\1', words[0])
177
178
       # 5. captialize first letter of each word
179
       words = [re.sub('^.', s[0].upper(), s) for s in words]
180
       # 6. concatenate
181
       enumNameCamel = ''.join(words)
```

Example python name normalization code

```
184
        # 1. Replace brackets with space
185
        = \sim s/[()] / q;
186
        # 2. replace \W with space if followed by letter, lower
187
        percent = \frac{1}{g} \left( \left[ A - Za - z \right] \left[ a - z \right] \right) / \frac{1}{g}
        # 3. non-word to underscore
188
        @words=split(/ /,$enumName);
189
        for (\$i=0;\$i<=\$\#words;\$i++)  { \$words[\$i]=\sim s/W//g; }
190
191
        # 4. move numbers to end of first word
        words[0] =  s/^(d+)(.*)/2/1/;
192
193
        # 5. captialize first letter of each word
194
        for($i=0;$i<=$#words;$i++) {
195
          substr(\$words[\$i],0,1)=\simtr/a-z/A-Z/;
196
197
        # 6. concatenate
198
        $enumNameCamel = join('',@words);
199
```

Example perl name normalization code

# 4.1.4 Type

182

183

200

201202

203204

205

206

208

213

215

Type must be a String containing one of the normalized CamelCase values as defined in the KMIP specification.

- Structure
- Integer
- LongInteger
- 207 BigInteger
  - Enumeration
- 209 Boolean
- 210 TextString
- 211 ByteString
- 212 DateTime
  - Interval
- 214 If type is not included, the default type of Structure SHALL be used.

#### 4.1.5 Value

The specification of a value is represented differently for each TTLV type.

## 4.1.6 JSON Object

- 218 For JSON encoding, each TTLV is represented as a JSON Object with properties 'tag', optional
- 219 'name', 'type' and 'value'.

```
220 {"tag": "ActivationDate", "type":"DateTime", "value":"2001-01-01T10:00:00+10:00"}
221 {"tag": "0x54FFFF", "name":"SomeExtension", "type":"Integer", "value":"0x000000001"}
```

- The 'type' property / attribute SHALL have a default value of 'Structure' and may be omitted for
- 223 Structures.

217

226

227

237

238

247

248

252

### 224 **4.1.6.1 Tags**

- 225 Tags are a String that may contain either:
  - The 3-byte tag hex value prefixed with '0x'
  - The normalised text of a Tag as specified in the KMIP Specification

Other text values may be used such as published names of Extension tags, or names of new tags added in future KMIP versions. Producers may however choose to use hex values for these tags to ensure they are understood by all consumers.

#### 4.1.6.2 Structure

For JSON, value is an Array containing sub-items, or may be null.

The 'type' property / attribute is optional for a Structure.

#### 4.1.6.3 Integer

249 For JSON, value is either a Number or a hex string.

```
250 {"tag": "BatchCount", "type":"Integer", "value":10}
251 {"tag": "BatchCount", "type":"Integer", "value":"0x0000000A"}
```

#### 4.1.6.4 Integer - Special case for Masks

- 253 (Cryptographic Usage Mask, Storage Status Mask):
- Integer mask values can also be encoded as a String containing mask components. JSON uses '|' as the separator. Components may be either the text of the enumeration value as defined in the KMIP
- 256 Specification or a 32-bit unsigned big-endian hex string.

#### 4.1.6.5 Long Integer

262

274

276

277278

279

294

301

For JSON, value is either a Number or a hex string. Note that JS Numbers are 64-bit floating point and

can only represent 53-bits of precision, so any values >= 2^52 must be represented as hex strings.

Note that this value (2<sup>60</sup>) is too large to be represented as a Number in JSON.

# 269 **4.1.6.6 Big Integer**

270 For JSON, value is either a Number or a hex string. Note that Big Integers must be sign extended to

contain a multiple of 8 bytes, and as per LongInteger, JS numbers only support a limited range of values.

#### 4.1.6.7 Enumeration

275 For JSON, value may contain:

- Number representing the enumeration 32-bit unsigned big-endian value
- Hex string representation of 32-bit unsigned big-endian value
- CamelCase enum text as defined in KMIP 9.1.3.2.x

#### 283 **4.1.6.8 Boolean**

For JSON, value must be either a hex string, or a JSON Boolean 'true' or 'false'.

#### 287 **4.1.6.9 Text String**

288 For JSON, value must be a String

```
289 {"tag": "AttributeName", "type": "TextString", "value": "Cryptographic Algorithm"}
```

#### 290 **4.1.6.10 Byte String**

291 For JSON, value must be a hex string. Note Byte Strings do not include the '0x' prefix, and do not have

any leading bytes.

```
293 {"tag": "MACSignature", "type": "ByteString", "value": "C50F77"}
```

#### 4.1.6.11 Date-Time

295 For JSON, value must be either a hex string, or an ISO8601 DateTime as used in XSD using format:

```
 296 \quad \hbox{'-'? yyyy '-' mm '-' dd 'T' hh ':' mm ':' ss ('.' s+)? ((('+' | '-') hh ':' mm) | 'Z')? }
```

Fractional seconds are not used in KMIP and should not generally be shown. If they are used, they should be ignored (truncated).

#### 4.1.6.12 Interval

For JSON, value is either a Number or a hex string. Note that intervals are 32-bit unsigned big-endian values.

```
304 {"tag": "Offset", "type":"Interval", "value":27} 305 {"tag": "Offset", "type":"Interval", "value":"0x0000001b"}
```

# 5 JSON Profile Test Cases

- The test cases define a number of request-response pairs for KMIP operations. Each test case is provided in the XML format specified in section 6 intended to be both human-readable and usable by automated tools. The time sequence (starting from 0) for each request-response pair is noted and line numbers are provided for ease of cross-reference for a given test sequence.
- Each test case has a unique label (the section name) which includes indication of mandatory (-M-) or optional (-O-) status and the protocol version major and minor numbers as part of the identifier.
- The test cases may depend on a specific configuration of a KMIP client and server being configured in a manner consistent with the test case assumptions.
- Where possible the flow of unique identifiers between tests, the date-time values, and other dynamic
- 316 items are indicated using symbolic identifiers in actual request and response messages these dynamic
- 317 values will be filled in with valid values.

306

320

321 322

323

324

325

- 318 Note: the values for the returned items and the custom attributes are illustrative. Actual values from a real
- 319 client system may vary as specified in section 8.4

# 5.1 Mandatory JSON Profile Test Cases KMIP v1.0

# 5.1.1 MSGENC-JSON-M-1-10 - Query, Maximum Response Size

- Perform a Query operation, querying the Operations and Objects supported by the server, with a restriction on the Maximum Response Size set in the request header. Since the resulting Query response is too big, an error is returned. Increase the Maximum Response Size, resubmit the Query request, and get a successful response.
- 326 The specific list of operations and object types returned in the response MAY vary.

# 5.3 Mandatory JSON Profile Test Cases KMIP v1.2

# 5.3.1 MSGENC-JSON-M-1-12 - Query, Maximum Response Size

Perform a Query operation, querying the Operations and Objects supported by the server, with a restriction on the Maximum Response Size set in the request header. Since the resulting Query response is too big, an error is returned. Increase the Maximum Response Size, resubmit the Query request, and get a successful response.

```

## 6 XML Profile

- The XML profile specifies the use of KMIP replacing the TTLV message encoding with an XML message
- encoding. The results returned using the XML encoding SHALL be logically the same as if the message
- encoding was in TTLV form. All size or length values specified within tag values for KMIP items SHALL be
- 348 the same in XML form as if the message encoding were in TTLV form. The implications of this are that
- 349 items such as MaximumResponseSize are interpreted to refer to a maximum length computed as if it
- were a TTLV-encoded response, not the length of the JSON-encoded response.

## 6.1 XML Encoding

## 6.1.1 Hex representations

- 353 Hex representations of numbers must always begin with '0x' and must not include any spaces. They may
- use either upper or lower case 'a'-'f'. The hex representation must include all leading zeros or sign
- extension bits when representing a value of a fixed width such as Tags (3 bytes), Integer (32-bit signed
- big-endian), Long Integer (64-bit signed big-endian) and Big Integer (big-endian multiple of 8 bytes). The
- 357 Integer values for -1, 0, 1 are represented as "0xfffffffff", "0x00000000", "0x00000001". Hex
- representation for Byte Strings are similar to numbers, but do not include the '0x' prefix, and can be of
- 359 any length.

344

351

352

360

363

367

375 376

377

378

379

380

## 6.1.2 Tags

- 361 Tags are a String that may contain either:
- The 3-byte tag hex value prefixed with '0x'
  - The normalised text of a Tag as specified in the KMIP Specification
- Other text values may be used such as published names of Extension tags, or names of new tags added in future KMIP versions. Producers may however choose to use hex values for these tags to ensure they are understood by all consumers.

## 6.1.3 Normalizing Names

- 368 KMIP text values of Tags, Types and Enumerations SHALL be normalized to create a 'CamelCase'
- format that would be suitable to be used as a variable name in C/Java or an XML element name.
- 370 The basic approach to converting from KMIP text to CamelCase is to separate the text into individual
- word tokens (rules 1-4), capitalize the first letter of each word (rule 5) and then join with spaces removed
- 372 (rule 6). The tokenizing splits on whitespace and on dashes where the token following is a valid word.
- 373 The tokenizing also removes round brackets and shifts decimals from the front to the back of the first
- word in each string. The following rules SHALL be applied to create the normalized CamelCase form:
  - 7. Replace round brackets '(', ')' with spaces
  - 8. If a non-word char (not alpha, digit or underscore) is followed by a letter (either upper or lower case) then a lower case letter, replace the non-word char with space
  - 9. Replace remaining non-word chars (except whitespace) with underscore.
  - 10. If the first word begins with a digit, move all digits at start of first word to end of first word
    - Capitalize the first letter of each word
- 38112. Concatenate all words with spaces removed382

kmip-addtl-msg-enc-v1.0-os

```
383
       # 1. Replace brackets with space
       noBrackets = re.sub('[()]', ' ', enumName)
384
       # 2. replace \W with space if followed by letter, lower
385
386
       nonWordToSpace = re.sub('\W([A-Za-z][a-z])', r' \1', noBrackets)
387
       # 3. non-word to underscore
388
       words = [re.sub('\W', '_', s) for s in nonWordToSpace.split()]
389
       # 4. move numbers to end of first word
390
       words[0] = re.sub('^(\d+)(.*)', r'\2\1', words[0])
391
       # 5. captialize first letter of each word
392
       words = [re.sub('^.', s[0].upper(), s) for s in words]
393
       # 6. concatenate
394
       enumNameCamel = ''.join(words)
```

Example python name normalization code

```
397
        # 1. Replace brackets with space
398
        = \sim s/[()] / q;
399
        # 2. replace \W with space if followed by letter, lower
400
        percent = \frac{1}{g} \left( \left[ A - Za - z \right] \left[ a - z \right] \right) / \frac{1}{g}
401
        # 3. non-word to underscore
        @words=split(/ /, $enumName);
402
403
        for (\$i=0;\$i<=\$\#words;\$i++) { \$words[\$i]=\sim s/\W//g; }
404
        # 4. move numbers to end of first word
        words[0] =  s/^(d+)(.*)/(2/1/;
405
406
        # 5. captialize first letter of each word
407
        for($i=0;$i<=$#words;$i++) {
408
           substr(\$words[\$i],0,1)=\simtr/a-z/A-Z/;
409
410
        # 6. concatenate
411
        $enumNameCamel = join('',@words);
412
```

Example perl name normalization code

## 6.1.4 Type

395

396

413

414 415

416 417

418

419

420

425

428

Type must be a String containing one of the normalized CamelCase values as defined in the KMIP specification.

- Structure
- Integer
- LongInteger
- BigInteger
- Enumeration
- 422 Boolean
- 423 TextString
- 424ByteString
  - DateTime
- 426Interval

427 If type is not included, the default type of Structure SHALL be used.

#### 6.1.5 Value

The specification of a value is represented differently for each TTLV type.

## 6.1.6 XML Element Encoding

For XML, each TTLV is represented as an XML element with attributes. The general form uses a single element named 'TTLV' with 'tag', optional 'name' and 'type' attributes. This form allows any TTLV including extensions to be encoded. For tags defined in the KMIP Specification or other well-known extensions, a more specific form can be used where each tag is encoded as an element with the same name and includes a 'type' attribute. For either form, structure values are encoded as nested xml elements, and non-structure values are encoded using the 'value' attribute.

437 438

439

440

430

```
<TTLV tag="0x420001" name="ActivationDate" type="DateTime" value="2001-01-01T10:00:00+10:00"/>
<TTLV tag="0x420001" type="DateTime" value="2001-01-01T10:00:00+10:00"/>
<ActivationDate type="DateTime" value="2001-01-01T10:00:00+10:00"/>
<TTLV tag="0x54FFFF" name="SomeExtension" type="DateTime" value="2001-01-01T10:00:00+10:00"/>
```

441442443

444

447

449

450

451

452

453

460 461

462

463

464

465

466

467

468

- The 'type' property / attribute SHALL have a default value of 'Structure' and may be omitted for Structures.
- 445 If namespaces are required, XML elements SHALL use the following namespace:
- 446 urn:oasis:tc:kmip:xmlns

#### 6.1.6.1 Tags

- 448 Tags are a String that may contain either:
  - The 3-byte tag hex value prefixed with '0x'
  - The normalised text of a Tag as specified in the KMIP Specification

Other text values may be used such as published names of Extension tags, or names of new tags added in future KMIP versions. Producers may however choose to use hex values for these tags to ensure they are understood by all consumers.

#### 6.1.6.2 Structure

For XML, sub-items are nested elements.

```
<ProtocolVersion type="Structure">
  <ProtocolVersionMajor type="Integer" value="1"/>
  <ProtocolVersionMinor type="Integer" value="0"/>
</ProtocolVersion>
  <ProtocolVersion>
  <ProtocolVersionMajor type="Integer" value="1"/>
  <ProtocolVersionMinor type="Integer" value="0"/>
</ProtocolVersion>
```

469 470 471

The 'type' property / attribute is optional for a Structure.

#### 472 **6.1.6.3 Integer**

473 For XML, value is a decimal and uses [XML-SCHEMA] type xsd:int

474 475

476

```
<BatchCount type="Integer" value="10"/>
```

## 6.1.6.4 Integer - Special case for Masks

477 (Cryptographic Usage Mask, Storage Status Mask):

```
478
       Integer mask values can also be encoded as a String containing mask components. XML uses an
479
       attribute with [XML-SCHEMA] type xsd:list which uses a space separator. Components may be either
480
       the text of the enumeration value as defined in KMIP 9.1.3.3.1 / KMIP 9.1.3.3.2, or a 32-bit unsigned big-
481
       endian hex string.
482
       <CryptographicUsageMask type="Integer" value="0x0000100c"/>
483
       <CryptographicUsageMask type="Integer" value="Encrypt Decrypt CertificateSign"/>
484
       <CryptographicUsageMask type="Integer" value="CertificateSign 0x00000004 0x00000008"/>
485
       <CryptographicUsageMask type="Integer" value="CertificateSign 0x0000000c"/>
       6.1.6.5 Long Integer
486
487
       For XML, value uses [XML-SCHEMA] type xsd:long
488
       <x540001 type="LongInteger" value="-2"/>
       <UsageLimitsCount type="LongInteger" value="1152921504606846976"/>
489
490
       6.1.6.6 Big Integer
491
       For XML, value uses [XML-SCHEMA] type xsd:hexBinary
492
       <X type="BigInteger" value="00000000000000"/>
493
       6.1.6.7 Enumeration
494
       For XML, value uses [XML-SCHEMA] type xsd:string and is either a hex string or the CamelCase enum
495
       text. If an XSD with xsd:enumeration restriction is used to define valid values (as is the case with the
496
       XSD included as an appendix), parsers should also accept any hex string in addition to defined enum
497
       values.
498
       <ObjectType type="Enumeration" value="0x00000002"/>
499
       <ObjectType type="Enumeration" value="SymmetricKey"/>
500
       6.1.6.8 Boolean
501
       For XML, value uses [XML-SCHEMA] type xsd:Boolean
502
       <BatchOrderOption type=Boolean" value="true"/>
503
       6.1.6.9 Text String
504
       XML uses [XML-SCHEMA] type xsd:string
505
       <AttributeName type="TextString" value="Cryptographic Algorithm"/>
506
       6.1.6.10 Byte String
507
       XML uses [XML-SCHEMA] type xsd:hexBinary
508
       <MACSignature type="ByteString" value="C50F77"/>
       6.1.6.11 Date-Time
509
510
       For XML, value uses [XML-SCHEMA] type xsd:dateTime
511
       <ArchiveDate type="DateTime" value="2001-01-01T10:00:00+10:00"/>

## 7 XML Profile Test Cases

517

531

532533

534 535

536

537

- The test cases define a number of request-response pairs for KMIP operations. Each test case is provided in the XML format specified in this section intended to be both human-readable and usable by automated tools. The time sequence (starting from 0) for each request-response pair is noted and line numbers are provided for ease of cross-reference for a given test sequence.
- Each test case has a unique label (the section name) which includes indication of mandatory (-M-) or optional (-O-) status and the protocol version major and minor numbers as part of the identifier.
- The test cases may depend on a specific configuration of a KMIP client and server being configured in a manner consistent with the test case assumptions.
- 526 Where possible the flow of unique identifiers between tests, the date-time values, and other dynamic 527 items are indicated using symbolic identifiers – in actual request and response messages these dynamic 528 values will be filled in with valid values.
- Note: the values for the returned items and the custom attributes are illustrative. Actual values from a real client system may vary as specified in section 8.4

## 7.1 Mandatory XML Profile Test Cases KMIP v1.0

## 7.1.1 MSGENC-XML-M-1-10 - Query, Maximum Response Size

Perform a Query operation, querying the Operations and Objects supported by the server, with a restriction on the Maximum Response Size set in the request header. Since the resulting Query response is too big, an error is returned. Increase the Maximum Response Size, resubmit the Query request, and get a successful response.

The specific list of operations and object types returned in the response MAY vary.

## 7.3 Mandatory XML Profile Test Cases KMIP v1.2

## 7.3.1 MSGENC-XML-M-1-12 - Query, Maximum Response Size

Perform a Query operation, querying the Operations and Objects supported by the server, with a restriction on the Maximum Response Size set in the request header. Since the resulting Query response is too big, an error is returned. Increase the Maximum Response Size, resubmit the Query request, and get a successful response.

The specific list of operations and object types returned in the response MAY vary.

## 8 Conformance

### 8.1 HTTPS Profile

555

556

566

573

580

585

## 557 8.1.1 HTTPS Client KMIP v1.0 Profile Conformance

- 558 KMIP client implementations conformant to this profile:
- 559 1. SHALL support the Authentication Suite conditions as specified in Section 2.1 of this profile.
- 560 2. SHALL support the KMIP Port Number conditions as specified in Section 2.2 of this profile.
- 3. SHALL support the Request URL conditions as specified in Section 2.3 of this profile.
- 562 4. SHALL support the HTTP Encoding conditions as specified in Section 2.4 of this profile.
- 5. SHALL support all the Mandatory HTTPS Profile Test Cases KMIP v1.0 (3.1)

## **8.1.2 HTTPS Client KMIP v1.1 Profile Conformance**

- 565 KMIP client implementations conformant to this profile:
  - 1. SHALL support the Authentication Suite conditions as specified in Section 2.1 of this profile.
- 2. SHALL support the KMIP Port Number conditions as specified in Section 2.2 of this profile.
- 568 3. SHALL support the Request URL conditions as specified in Section 2.3 of this profile.
- 4. SHALL support the HTTP Encoding conditions as specified in Section 2.4 of this profile.
- 5. SHALL support all the Mandatory HTTPS Profile Test Cases KMIP v1.1 (3.2)

## **8.1.3 HTTPS Client KMIP v1.2 Profile Conformance**

- 572 KMIP client implementations conformant to this profile:
  - 1. SHALL support the Authentication Suite conditions as specified in Section 2.1 of this profile.
- 574 2. SHALL support the KMIP Port Number conditions as specified in Section 2.2 of this profile.
- 575 3. SHALL support the Request URL conditions as specified in Section 2.3 of this profile.
- 576 4. SHALL support the HTTP Encoding conditions as specified in Section 2.4 of this profile.
- 577 5. SHALL support all the Mandatory HTTPS Profile Test Cases KMIP v1.2 (3.3)

## 578 8.1.4 HTTPS Server KMIP v1.0 Profile Conformance

- 579 KMIP server implementations conformant to this profile:
  - 1. SHALL support the Authentication Suite conditions as specified in Section 2.1 of this profile.
- 581 2. SHALL support the KMIP Port Number conditions as specified in Section 2.2 of this profile.
- 582 3. SHALL support the Request URL conditions as specified in Section 2.3 of this profile.
- 583 4. SHALL support the HTTP Encoding conditions as specified in Section 2.5 of this profile.
- 5. SHALL support all the Mandatory HTTPS Profile Test Cases KMIP v1.0 (3.1)

## 8.1.5 HTTPS Server KMIP v1.1 Profile Conformance

- 586 KMIP server implementations conformant to this profile:
- 587 1. SHALL support the Authentication Suite conditions as specified in Section 2.1 of this profile.
- 588 2. SHALL support the KMIP Port Number conditions as specified in Section 2.2 of this profile.
- 589 3. SHALL support the Request URL conditions as specified in Section 2.3 of this profile.

- 590 4. SHALL support the HTTP Encoding conditions as specified in Section 2.5 of this profile.
- 5. Mandatory HTTPS Profile Test Cases KMIP v1.1 (3.2)

## 592 8.1.6 HTTPS Server KMIP v1.2 Profile Conformance

- 593 KMIP server implementations conformant to this profile:
- 594 1. SHALL support the Authentication Suite conditions as specified in Section 2.1 of this profile.
- 595 2. SHALL support the KMIP Port Number conditions as specified in Section 2.2 of this profile.
- SHALL support the Request URL conditions as specified in Section 2.3 of this profile.
- 597 4. SHALL support the HTTP Encoding conditions as specified in Section 2.5 of this profile.
- 5. SHALL support all the Mandatory HTTPS Profile Test Cases KMIP v1.2 (3.3)

## 599 8.2 JSON Profile

600

604

611

612

616

617

618

#### 8.2.1 JSON Client KMIP v1.0 Profile Conformance

- KMIP client implementations conformant to this profile:
- 502 1. SHALL support JSON message encoding for request and response messages as specified in Section 4.1 of this profile.
  - 2. SHALL support all the Mandatory JSON Profile Test Cases KMIP v1.0 (5.1)
- 3. SHALL support mapping of all TTLV tags and enumerations specified within each version of the [KMIP-SPEC] that is supported
- 4. SHALL support user defined extensions containing additional tags and enumerations not specified within [KMIP-SPEC]

## 8.2.2 JSON Client KMIP v1.1 Profile Conformance

- 610 KMIP client implementations conformant to this profile:
  - SHALL support JSON message encoding for request and response messages as specified in Section 4.1 of this profile.
- 613 2. SHALL support all the Mandatory JSON Profile Test Cases KMIP v1.1 (5.2)
- 3. SHALL support mapping of all TTLV tags and enumerations specified within each version of the [KMIP-SPEC] that is supported
  - SHALL support user defined extensions containing additional tags and enumerations not specified within [KMIP-SPEC]

#### 8.2.3 JSON Client KMIP v1.2 Profile Conformance

- 619 KMIP client implementations conformant to this profile:
- 520 1. SHALL support JSON message encoding for request and response messages as specified in Section 4.1 of this profile.
- 622 2. SHALL support all the Mandatory JSON Profile Test Cases KMIP v1.2(5.3)
- 3. SHALL support mapping of all TTLV tags and enumerations specified within each version of the [KMIP-SPEC] that is supported
- 4. SHALL support user defined extensions containing additional tags and enumerations not specified within [KMIP-SPEC]

## 8.2.4 JSON Server KMIP v1.0 Profile Conformance

628 KMIP server implementations conformant to this profile:

- 529 1. SHALL support JSON message encoding for request and response messages as specified in Section 4.1 of this profile.
- 2. SHALL support all the Mandatory JSON Profile Test Cases KMIP v1.0 (5.1)
- 3. SHALL support mapping of all TTLV tags and enumerations specified within each version of the [KMIP-SPEC] that is supported
  - 4. SHALL support user defined extensions containing additional tags and enumerations not specified within [KMIP-SPEC]

#### 8.2.5 JSON Server KMIP v1.1 Profile Conformance

- 637 KMIP server implementations conformant to this profile:
  - 1. SHALL support JSON message encoding for request and response messages as specified in Section 4.1 of this profile.
- 640 2. SHALL support all the Mandatory JSON Profile Test Cases KMIP v1.1 (5.2)
  - SHALL support mapping of all TTLV tags and enumerations specified within each version of the [KMIP-SPEC] that is supported
- 4. SHALL support user defined extensions containing additional tags and enumerations not specified within [KMIP-SPEC]

## 8.2.6 JSON Server KMIP v1.2 Profile Conformance

- 646 KMIP server implementations conformant to this profile:
  - 1. SHALL support JSON message encoding for request and response messages as specified in Section 4.1 of this profile.
- 649 2. SHALL support all the Mandatory JSON Profile Test Cases KMIP v1.2(5.3)
- 3. SHALL support mapping of all TTLV tags and enumerations specified within each version of the [KMIP-SPEC] that is supported
  - SHALL support user defined extensions containing additional tags and enumerations not specified within [KMIP-SPEC]

## 8.3.1 XML Client KMIP v1.0 Profile Conformance

- 656 KMIP client implementations conformant to this profile:
  - SHALL support XML message encoding for request and response messages as specified in Section 6.1 of this profile.
  - 2. SHALL support all the Mandatory XML Profile Test Cases KMIP v1.0(7.1)
  - 3. SHALL support mapping of all TTLV tags and enumerations specified within each version of the [KMIP-SPEC] that is supported.
  - SHALL support user defined extensions containing additional tags and enumerations not specified within [KMIP-SPEC].

#### 8.3.2 XML Client KMIP v1.1 Profile Conformance

- KMIP client implementations conformant to this profile:
  - 1. SHALL support XML message encoding for request and response messages as specified in Section 6.1 of this profile.
  - 2. SHALL support all the Mandatory XML Profile Test Cases KMIP v1.1(7.2)
- 3. SHALL support mapping of all TTLV tags and enumerations specified within each version of the [KMIP-SPEC] that is supported.

4. SHALL support user defined extensions containing additional tags and enumerations not specified within [KMIP-SPEC].

### 8.3.3 XML Client KMIP v1.2 Profile Conformance

674 KMIP client implementations conformant to this profile:

675 676

677

682

684

685

686

687

688 689

690

693

696 697

698

699

702

703

704 705

706

707

708

709

- SHALL support XML message encoding for request and response messages as specified in Section 6.1 of this profile.
  - 2. SHALL support all the Mandatory XML Profile Test Cases KMIP v1.2(7.3)
- 3. SHALL support mapping of all TTLV tags and enumerations specified within each version of the [KMIP-SPEC] that is supported.
- 4. SHALL support user defined extensions containing additional tags and enumerations not specified within [KMIP-SPEC].

## 8.3.4 XML Server KMIP v1.0 Profile Conformance

- 683 KMIP server implementations conformant to this profile:
  - 1. SHALL support XML message encoding for request and response messages as specified in Section 6.1 of this profile.
  - SHALL support all the Mandatory XML Profile Test Cases KMIP v1.0(7.1)
    - SHALL support mapping of all TTLV tags and enumerations specified within each version of the [KMIP-SPEC] that is supported.
    - 4. SHALL support user defined extensions containing additional tags and enumerations not specified within [KMIP-SPEC].

## 8.3.5 XML Server KMIP v1.1 Profile Conformance

- 692 KMIP server implementations conformant to this profile:
  - SHALL support XML message encoding for request and response messages as specified in Section 6.1 of this profile.
    - 2. SHALL support all the Mandatory XML Profile Test Cases KMIP v1.1(7.2)
    - SHALL support mapping of all TTLV tags and enumerations specified within each version of the [KMIP-SPEC] that is supported.
    - 4. SHALL support user defined extensions containing additional tags and enumerations not specified within [KMIP-SPEC].

#### 700 8.3.6 XML Server KMIP v1.2 Profile Conformance

- 701 KMIP server implementations conformant to this profile:
  - 1. SHALL support XML message encoding for request and response messages as specified in Section 6.1 of this profile.
  - 2. SHALL support all the Mandatory XML Profile Test Cases KMIP v1.2(7.3)
    - SHALL support mapping of all TTLV tags and enumerations specified within each version of the [KMIP-SPEC] that is supported.
    - 4. SHALL support user defined extensions containing additional tags and enumerations not specified within [KMIP-SPEC].

#### 8.4 Permitted Test Case Variations

710 Whilst the test cases provided in this Profile define the allowed request and response content, some inherent variations MAY occur and are permitted within a successfully completed test case.

- 712 Each test case MAY include allowed variations in the description of the test case in addition to the
- 713 variations noted in this section.
- 714 Other variations not explicitly noted in this Profile SHALL be deemed non-conformant.

#### 8.4.1 Variable Items

- An implementation conformant to this Profile MAY vary the following values:
- 717 1. UniqueIdentifier

715

724

725 726

727

728

729 730

731

732

733

734

735

736

737

741

742

744

748

750

- 718 2. PrivateKeyUniqueIdentifier
- 719
   PublicKeyUniqueIdentifier
- 720 4. UniqueBatchItemIdentifier
- 721 5. AsynchronousCorrelationValue
- 722 6. TimeStamp
- 723 7. KeyValue / KeyMaterial including:
  - a. key material content returned for managed cryptographic objects which are generated by the server
  - b. wrapped versions of keys where the wrapping key is dynamic or the wrapping contains variable output for each wrap operation
  - 8. For response containing the output of cryptographic operation in Data / SignatureData/ MACData / IVCounterNonce where:
    - a. the managed object is generated by the server; or
    - b. the operation inherently contains variable output
  - 9. For the following DateTime attributes where the value is not specified in the request as a fixed DateTime value:
    - a. ActivationDate
    - b. ArchiveDate
    - c. CompromiseDate
    - d. CompromiseOccurrenceDate
- 738 e. DeactivationDate
- f. DestroyDate
- 740 g. InitialDate
  - h. LastChangeDate
    - ProtectStartDate
- 743 i. ProcessStopDate
  - k. ValidityDate
- 745 I. OriginalCreationDate
- 746 10. LinkedObjectIdentifier
- 747 11. DigestValue
  - a. For those managed cryptographic objects which are dynamically generated
- 749 12. KeyFormatType
  - a. The key format type selected by the server when it creates managed objects
- 751 13. Digest
- 752 a. The HashingAlgorithm selected by the server when it calculates the digest for a managed object for which it has access to the key material
  - b. The Digest Value

- 755 14. Extensions reported in Query for ExtensionList and ExtensionMap
  - Application Namespaces reported in Query
- 757 16. Object Types reported in Query other than those noted as required in this profile
- 758 17. Operation Types reported in Query other than those noted as required in this profile (or any referenced profile documents)
  - 18. For TextString attribute values containing test identifiers:
    - a. Additional vendor or application prefixes
  - 19. Additional attributes beyond those noted in the response

- An implementation conformant to this Profile MAY allow the following response variations:
  - 20. Object Group values May or may not return one or more Object Group values not included in the requests
  - 21. y-CustomAttributes May or may not include additional server-specific associated attributes not included in requests
  - 22. Message Extensions May or may not include additional (non-critical) vendor extensions
  - 23. TemplateAttribute May or may not be included in responses where the Template Attribute response is noted as optional in [KMIP-SPEC]
  - 24. AttributeIndex May or may not include Attribute Index value where the Attribute Index value is 0 for Protocol Versions 1.1 and above.
  - 25. ResultMessage May or may not be included in responses and the value (if included) may vary from the text contained within the test case.
  - 26. The list of Protocol Versions returned in a DiscoverVersion response may include additional protocol versions if the request has not specified a list of client supported Protocol Versions.
  - 27. VendorIdentification The value (if included) may vary from the text contained within the test case.

#### 8.4.2 Variable behavior

- 781 An implementation conformant to this Profile SHALL allow variation of the following behavior:
  - A test MAY omit the clean-up requests and responses (containing Revoke and/or Destroy) at the end of the test provided there is a separate mechanism to remove the created objects during testing.
  - 2. A test MAY omit the test identifiers if the client is unable to include them in requests. This includes the following attributes:
    - a. Name; and
    - b. x-ID
  - 3. A test MAY perform requests with multiple batch items or as multiple requests with a single batch item provided the sequence of operations are equivalent
- 791 4. A request MAY contain an optional *Authentication* [KMIP SPEC] structure within each request.

#### **Appendix A. Acknowledgments** 792

The following individuals have participated in the creation of this specification and are gratefully acknowledged:

#### 793 **Original HTTPS Profile Proposal:**

Alan Frindell, SafeNet, Inc.

# **Appendix C. Revision History**

908

907

Revision	Date	Editor	Changes Made
wd01	26-June-2013	Tim Hudson	Merged version of the three committee draft documents. Updated conformance wording style. Updated test case style. Applied new OASIS template.
wd02	6-August-2013	Tim Hudson	Updated to include Permitted Test Case Variations
wd03	10-August-2013	Tim Hudson	Updated Permitted Test Case Variations
